Aquaseal ME12/Permashield Non-Sacrificial, Graffiti Control System MAINTENANCE PROCEDURES

Section 07190-Water Repellent (Aquaseal ME12)

Section 09960-Graffiti Resistant Coating (Permashield Non-Sacrificial)

Section 03910- Specialty Cleaners (Citrus Clean)

Recommended System/Application

- Aquaseal ME12 (Base/Sealer) must be used to the entire exterior unpainted perimeter elevation. Apply one flood coat and allow it to dry for 24 hours minimum.
- Permashield Non-Sacrificial (Top Coat) may be used to the required height and three or more fog coats may be needed; allow 30 minutes between coats.
- Citrus Clean, Biodegradable citrus base, graffiti cleaner/remover.

Recommended Maintenance Procedures

- Aquaseal ME12 is a penetrating sealer that will remain water resistant for 10 years. No maintenance is required during the 10 year period.
- Cleaned with our Citrus Cleaner, Permashield Non-Sacrificial is capable of withstanding a minimum of 5 years of exterior exposure without a significant loss of protection, other than spot restoration in areas excessively attacked by graffiti.
- Citrus Clean is a water base, powerful graffiti remover, degreaser and cleaner. It is the required cleaner to remove/clean graffiti and stubborn marking from surfaces protected with Permashield Non-Sacrificial. The more you use the cleaner, the shorter the life expectancy of the Permashield Non-Sacrificial.

For additional information, please refer to our Technical Data Sheets or call your distributor or the manufacturer.

Sincerely,

MONOPOLE, INC.
